

Godwin Emefiele

Air Dominance Systems Engineer, The Boeing Company

I am a Systems Engineer at The Boeing Company working on the T-7A program within Systems Engineering Integration & Test (SEIT). My work focuses on safety-critical analysis, Safety Critical Function Thread Analyses (SCFTA), airworthiness gap resolution, and engagement with government stakeholders across the F-15 and T-7A platforms.

I graduated from the USC Viterbi School of Engineering in 2025 with a B.S. in Electrical and Computer Engineering (Computer Engineering emphasis), and I am currently pursuing an M.S. in Artificial Intelligence at the Johns Hopkins University Whiting School of Engineering.

Projects

Python projects completed for the JHU Modern Software Concepts course.

Module 1: Personal Flask Website

A personal developer website built with Python and Flask. The site uses a Flask blueprint to organize its pages, Jinja2 HTML templates for the layout, and a CSS style sheet for colors and spacing. It includes a home page with a bio and photo, a contact page, and this projects page, all connected by a highlighted navigation bar. The site runs locally on port 8080 with the command 'python run.py'.
